

# W5 Aviation LLC Completions & Refurbishment Management

Dear valued customer

W5 Aviation is in a position to offer the client a turnkey solution for any completion project ranging from a single modification to a full interior and exterior refurbishment or new aircraft completion.

## Completions Management

The new aircraft completion management starts with the selection of a suitable aircraft for the mission profile of the customer. As a next step, the specification needs to be defined considering the customer's preferences and likes as well as the regulatory requirements of the country of registration. Where necessary, highly qualified designers are introduced to help define just the perfect interior design. We continue with a thorough inspection of the green (basic) aircraft followed by the completion monitoring. This monitoring comprises of strategically scheduled visits at the completion center ensuring the aircraft is built to the customers specification and meets the expected level of quality. The final acceptance is a mere confirmation that the aircraft is acceptable in terms of quality, incorporated options and functionality.

### Designed for:

Monitoring new aircraft production at the manufacturer.

By following every step of the completion, W5 Aviation is in a position to monitor time, quality and budget and initiate corrective action if the performance is unsatisfactory.

We can provide the full management service or join the project at any stage as desired.

## Refurbishment Management

The key elements in refurbishment management are similar to those discussed above. We often find the certification of modifications the most challenging factor in refurbishment projects. Therefore, feasibility studies of proposed modifications are important. The start of the project therefore is well in advance, sometimes up to 6-12 months before the aircraft enters the completion center. As there is no catalogue to choose options from, the first phase (Specification Consulting) is key to the success of the project.

### Designed for:

Planning, monitoring and delivering used aircraft interior and exterior refurbishments.

## Reporting

W5 Aviation takes pride in the informative and easy to read reports provided after each visit. Discrepancies are recorded in detail and rectifications monitored. Statistics help identify problem areas and allow early introduction of countermeasures. Every effort is made to produce a high level of visibility to the client.

W5 Aviation Completion Management Operational Kit

Overall Status: OK  
Aircraft: 100  
Completion Center: 100

Date: 2012-12-12

No.	Description	Image	Proposed Solution	Date Observed	Next Deadline	Group	Cause	Risk	Author	Closed
