ABOUT COMPLETIONS & REFURBISHMENT MANAGEMENT

Dear valued customer

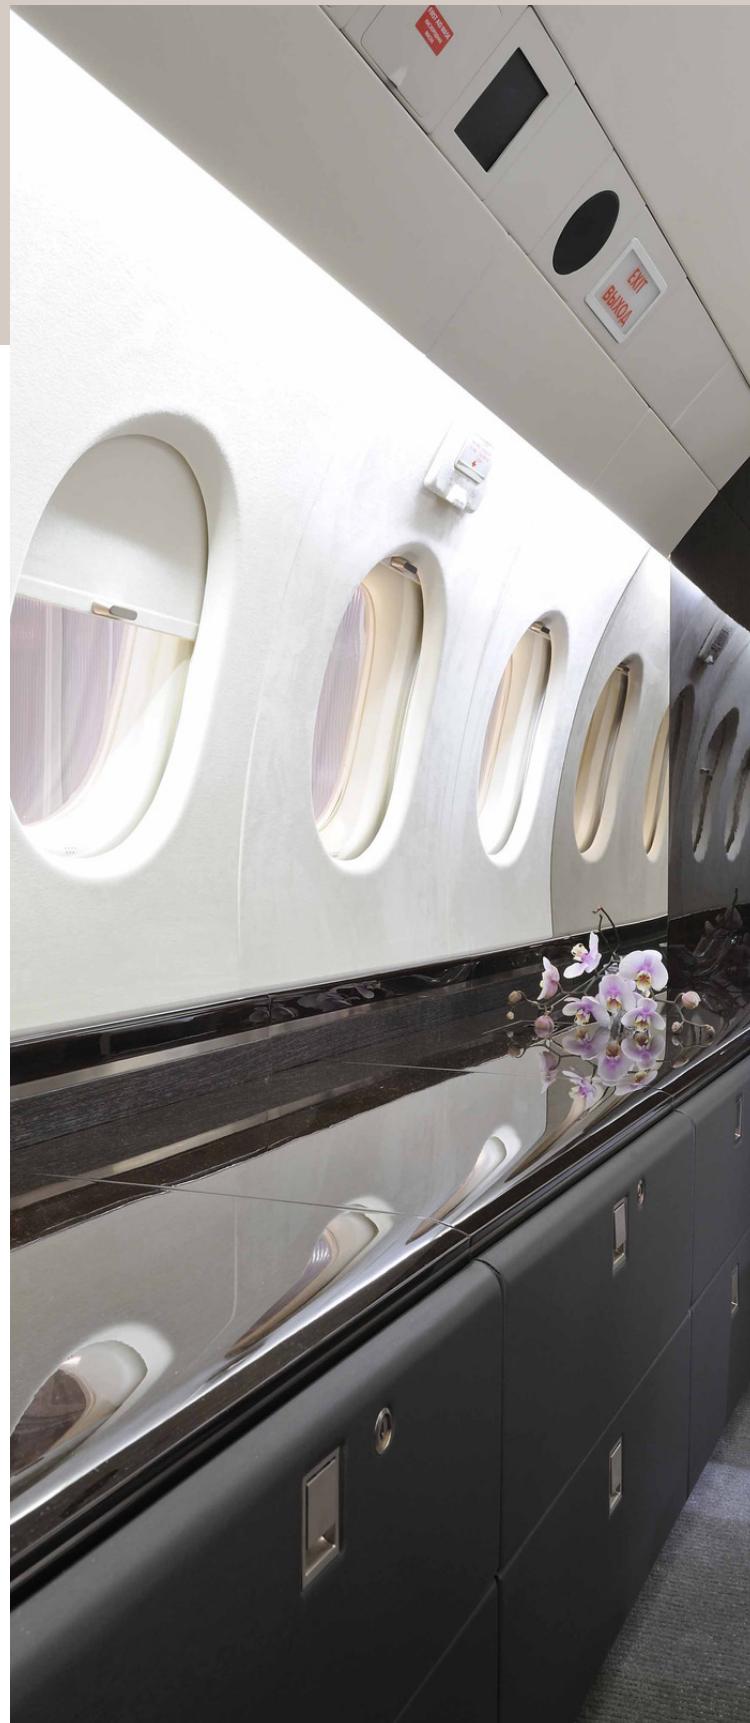

The design and outfitting of your aircraft interior, drafting the exterior paint scheme and selecting system options suitable to your aircraft mission profile is a very personal matter.

W5 Aviation makes your matter our own. We take on the responsibility to ensure the highest level of quality from the design specification through to the final delivery of your new aircraft or refurbishment project.

Please don't hesitate to contact us for a proposal tailored to your specific requirements.

LUKAS WEISS
DIRECTOR

COMPLETIONS MANAGEMENT

DESIGNED FOR MONITORING NEW AIRCRAFT PRODUCTION
& COMPLETION AT THE MANUFACTURER

By following every step of the completion, W5 Aviation is in position to monitor time, quality and budget and initiate corrective action if the performance is unsatisfactory. We can provide the full management service or join the project at any stage as desired.

COMPLETIONS MANAGEMENT

**1**

SPECIFICATIONS REVIEW & CONSULTING

The new aircraft completion management starts with the selection of a suitable aircraft for the mission profile of the customer. As a next step the specification needs to be defined considering the customer's preferences and likes as well as the regulatory requirements of the country of registration. Where necessary, highly qualified designers are introduced to help define just the perfect interior design.

**2**

GREEN DELIVERY

We continue with a thorough inspection of the green (basic) aircraft followed by the completion monitoring.

3

AIRCRAFT COMPLETION

This monitoring comprises of strategically scheduled visits at the completion center ensuring the aircraft is built to the customers specification and meets the expected level of quality.

**4**

FINAL DELIVERY

The final acceptance is a mere confirmation that the aircraft is acceptable in terms of quality, incorporated options and functionality.

REFURBISHMENT MANAGEMENT

DESIGNED FOR PLANNING, MONITORING AND
DELIVERING USED AIRCRAFT INTERIOR & EXTERIOR
REFURBISHMENTS

The key elements in refurbishment management are similar to those discussed under completions management above. We often find the certification of modifications the most challenging factor in refurbishment projects. Therefore, feasibility studies of proposed modifications are important.

The start of the project therefore is well in advance, sometimes up to 6-12 months before the aircraft enters the completion center. As there is no catalogue to choose options from, the first phase (Specification Consulting) is key to the success of the project.

REPORTING

W5 Aviation takes pride in the informative and easy to read reports provided after each visit. Discrepancies are recorded in detail and rectifications monitored. Statistics help identify problem areas and allow early introduction of countermeasures. Every effort is made to produce a high level of visibility to the client.
